## EDUCATION

---

|                                                                           |               |
|---------------------------------------------------------------------------|---------------|
| <b>New York University (Courant Institute of Mathematical Sciences)</b>   | New York, NY  |
| Master of Science in Computer Science (Bachelor's-Master's Track)         | December 2027 |
| Bachelor of Arts in Computer Science/Mathematics Minor                    | December 2026 |
| Relevant Coursework: Fundamentals of Machine Learning, Parallel Computing |               |

## EXPERIENCE

---

|                                         |                    |
|-----------------------------------------|--------------------|
| <b>Hewlett Packard Enterprise (HPE)</b> | San Jose, CA       |
| <i>Cloud Engineer Intern</i>            | May 2026 - Present |

- Leveraged LLMs to automate observability and alerting on various Kafka services, giving insights on 3000+ unique alerts per day.
- Created an Agentic CI/CD pipeline to generate Kafka events and analyze potential CI mismatches, alerting users to issues before builds begin
- Extracted infrastructure metrics on 10+ Kafka services, such as Memory and CPU usage

|                                                       |                           |
|-------------------------------------------------------|---------------------------|
| <b>NYU High Speed Research Network</b>                | New York, NY              |
| <i>Research Engineering Project Manager/Team Lead</i> | September 2025 - May 2026 |

- Manage all applications regarding the Research Engineering team, taking charge of sprints and deadlines
- Developed a node orchestrator for other research at NYU to utilize for their workflows

|                                    |                         |
|------------------------------------|-------------------------|
| <b>Bessemer Trust</b>              | New York, NY            |
| <i>Software Engineering Intern</i> | June 2025 - August 2025 |

- Created and deployed a firm-wide micro-frontend application to retrieve subaccounts not following the trading model, automating and centralizing the trading process
- Programmed a custom GPT to improve performance by 600% on the Investment Management database

|                                           |                     |
|-------------------------------------------|---------------------|
| <b>Maximus</b>                            | Princeton, NJ       |
| <i>DevOps/Software Engineering Intern</i> | May 2024 - May 2025 |

- Developed Python scripts to automate ticket relaying information to the IT department
- Led a deployment streamlining the application process for Pennsylvania Medicare

## PROJECTS

---

**Steam Game Matcher** (<https://steam-game-matcher.streamlit.app/>)

- Built a Streamlit app for natural-language Steam game discovery: fused embeddings + TF-IDF via RRF with Cross-Encoder rerank to improve relevance.
- Curated 10k+ games, delivering instant results and cluster-based recommendations to boost discovery accuracy, all through machine learning techniques.

## HONORS & AWARDS

---

|                            |                   |
|----------------------------|-------------------|
| <b>New York University</b> | New York, NY      |
| Dean's List                | June 2025, 2026   |
| <b>Rutgers University</b>  | New Brunswick, NJ |
| AT&T Scholarship Recipient | August 2023       |

## SKILLS & INTERESTS

---

**Programming Languages:** Python, Java, SQL, NoSQL, JavaScript, C, C++, C#, HTML/CSS, Go, PromQL  
**Technical Concepts:** Pandas, NumPy, Flask, JIRA, SCRUM, AGILE Methodologies, AWS, Assembly, APIs, Linux, Docker, Git, React, TypeScript, GraphQL, LLMs, Probability and Statistics  
**Hobbies:** Triathlete, Marathon Finisher, Former US Wushu National Team Member (2020)
